Tissues, Organs, and Organ Systems

Sr	Questions	Answers Choice
1	Which description of xylem is correct.	A. A cell used for absorption B. A tissue used for trasnport C. An organ used for transport D. An organ system used for conduction
2	The level of organization which is represented by the heart of frog is.	A. Tissue B. Organ C. Organism D. Organelle
3	What is the primary function of the root system is plants.	A. Absorbing water B. Photosynthesis C. Gas exchange D. Reproduction
4	At which level of organization gas exchage occurs between body and environment.	A. Organ system level in the respiratory system B. Oranelle level in mitochondria C. Cellular level in alveolar cells D. Tissue level in epithelial tissues
5	If tissue level is not developed in the levels of organization. Whcih of the next level will not be formed.	A. Organelle level B. Organ level C. Molecular level D. Atomic level
6	Biological organization means.	A. Study of differente organisms B. Study of biology at differente levels C. Study of differente branches of biology D. Study of all the subjects of science
7	This statemtn about homeostasis is inccorect.	A. There is one system regulating the homeostatic activities B. Because fo this , the fluctuations of the internal environment are of extremely narrow range as compared to that of the external environment C. Homeostatic mechanismsm keep the internal environment constant depite wide changes in the external environment D. Homeostasis is necessary for the survival of cells
8	What type of tissue lines the inner surface of the stomach.	A. Nervous B. Epithelial C. Muscular D. Connective
9	Which of the following statements best describes homeostasis.	A. Keeping the body in a fixed and unaltered state B. Dynamic equilibrium C. Maintaining a near constant intrnal environment D. Altering the exernal environment to accommodate the body's needs.
10	What is homeostasis.	A. A type of hormone B. Digestive process C. The body's way of maintaiing a stable internal environment D. A respiratory function
11	Which part of the platn is primarity involved in photosynthesis.	A. Root B. Stem C. Flower D. Leaf
12	What tissue transports water in plants.	A. Epidermal B. Mesophyll C. Pholem D. Xylem

13	Which of these is a function of the human skeletal system.	A. Storing minerals and producing blood cells B. Removing crbon dioxide from blood C. Filtering blood to remove waste products D. Breaking down food for energy.
14	Whcih structure is not an organ.	A. Xylem B. Flower C. Artery D. Spinal Cord
15	Which of the following lists the levels of body organization from smallest to largest.	A. Organism,organ system organ, tissue, cell B. Tissue, cell, orga, organ system organism C. Organ,organ system, organism, tissue , cell D. Cell, tissue, organ, organ system, organism
16	You can observe spongy mesophyli and xylem in the cross section of leaf. These are part of the same	A. Tissue and organ B. Cell and tissue C. Organ and organism D. Cell and organism
17	The epithelial tissue in the stomach wall is responsibel for producing.	A. Mucus B. Pepsinogen C. Hydrochloric acid D. All of these
18	What is the primary function of the xylem tissue in a leaf.	A. To transport sugars to othe rparts B. To control the opening and closing of stomata C. To transport water to parts of leaf D. To synthesize chlorophyll
19	What is the main function of the nervous system.	A. Digesting food B. Circulating blood C. Controllig and coordinating D. Plastids
20	The epithelial tissue in the stomach wall is responsbible for producing	A. Mucus B. Pepsinogen C. Hydrochloric acid D. All of these
